At the heart of "How We Think," Dewey explores a series of fundamental concepts that shape our thinking processes. These include:

- **Critical Thinking:** Dewey argues that critical thinking is not simply a matter of following rules or memorizing facts. Rather, it is an active and reflective process that involves questioning, analyzing, and evaluating information to form sound judgments.
- **Reflective Thinking:** Closely related to critical thinking, reflective thinking involves looking back on our experiences and considering how they have influenced our ideas and actions. Dewey believed that by reflecting on our past experiences, we can learn from our mistakes and make better decisions in the future.
- **Problem Solving:** According to Dewey, problem solving is an essential skill that allows us to overcome challenges and find solutions to real-world problems. He emphasizes the importance of defining the problem clearly, gathering relevant information, and generating and evaluating potential solutions.
- **Philosophy of Education:** Dewey's ideas on thinking have had a profound impact on education reform. He believed that education should focus on developing students' critical thinking and problem-solving abilities rather than simply rote memorization of facts.

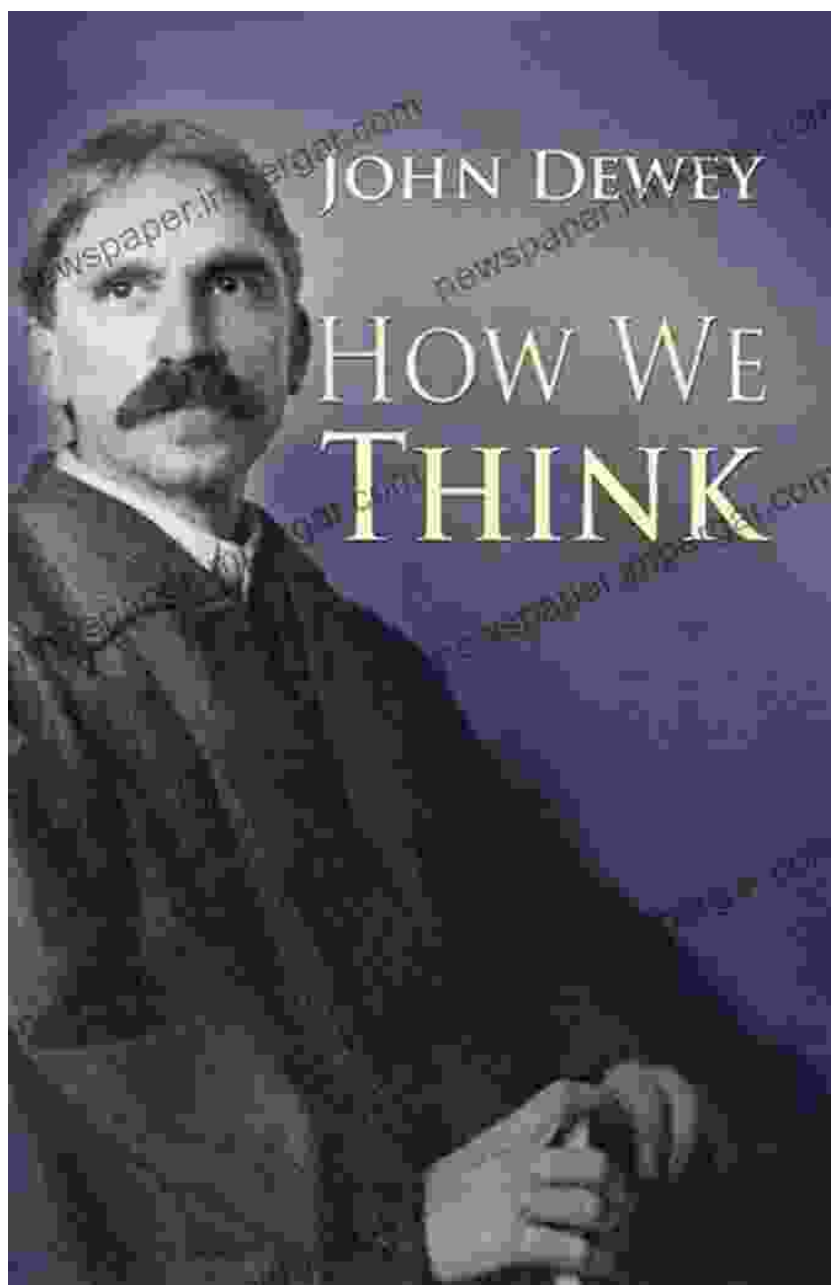

- **Learning Theories:** Dewey's theories of learning emphasize the importance of experience and active involvement in the learning process. He argued that students learn best when they engage with the material and actively participate in their own education.
